**Matthew J. Commers : Determinants of Health: Theory, Understanding, Portrayal, Policy (International Library of Ethics, Law, and the New Medicine)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Determinants of Health: Theory, Understanding, Portrayal, Policy (International Library of Ethics, Law, and the New Medicine):

0 of 3 people found the following review helpful. Nice book for advanced learners  
By Dr. Atul Tiwari  
This book is only for those who want to learn mechanics of materials at graduate or higher level.  
3 of 8 people found the following review helpful. A fascinating account of early astronomical records  
By John Seymour  
A fascinating and readable account of astronomy in the ancient and mediaeval world. This book contains an detailed description of eclipse records and their place in early societies. Highly recommended.  
0 of 5 people found the following review helpful. Excellent Composites Text  
By Nick D.  
Great resource on composite materials. I used it in my Undergraduate study of aerospace composites. The book served as a great resource in introductory composites. I haven't studied much of the higher-level content of the book, but it's still in my bookshelf. I plan to continue the study of aerospace composites at the graduate level, and you can guarantee that I will be breaking this book out once more. The book came as described in great condition. This was much cheaper than the full retail price of the book. Would definitely recommend to other seeking a resource on composites.

For decades, health professionals have asserted the importance of public participation in interventions for health. Medicine has pursued patient participation in clinical decision-making. In the public health realm, target groups have been asked to assist in the design and implementation of initiatives for health. In practice, however, patients and populations expect health professionals to give advice and - in some cases - to make decisions on their behalf. This implies limits to the ideal of participation. In this innovative work, the author contrasts public and professional understandings of health and the best ways to achieve health. The result is a model of lay participation in the structuring of medical and public health activity. The book is unique due to its policy-applicable, quantitative studies and its theoretical analysis of works by Ren Dubos and Aaron Antonovsky. It will be of value to professionals in health promotion, health education, medical anthropology, and social epidemiology.
