The Uniform Domain Name Dispute Resolution Policy (UDRP) was implemented by the Internet Corporation for Assigned Names and Numbers (ICANN) in 1999. Between 2000 when the first domain name case was decided and 2015 there have been over 45,000 decided cases. That's approximately 3,500 to 4,000 decisions annually. Parties never confront each other in person as they do in a court of law. The entire procedure takes place online. The UDRP is a quick, efficient and relatively inexpensive regime for determining rights to domain names. Trademark owners can challenge domain name registrants for infringement of their rights to the exclusive use of their marks on the Internet. Decisions are then posted online within 45 days of the submission of the complaint. From these decisions has emerged a unique body of domain name law. One of the several truths gained from the collective wisdom of panelists who decide UDRP cases is that parties often fail to understand the evidentiary demands they must satisfy to succeed. DOMAIN NAME ARBITRATION is the most comprehensive and in-depth work on the jurisprudence of domain names. It fully describes and illustrates, with case law, the procedural process and proof elements required of the parties. In addition, it thoroughly explores the law governing registration and use of domain names that are identical or confusingly similar to trademarks. The book provides an analytical description of the process and a step-by-step examination of the evidentiary elements that parties must satisfy to establish the merits of a claim or defense of infringement. As the Honorable Neil A. Brown, Queens Counsel in Melbourne, Australia writes in the book's Foreword, "Domain Name Arbitration puts flesh on the bones by illustrating how jurisprudence crafted by panelists makes UDRP a living and working dispute resolution regime."

"At well over 500 pages, Gerald M. Levine who is an attorney, as well as a UDRP panelist, has written the definitive book on the Uniform Domain Name Resolution Policy, (UDRP)."-- DomainHorizon.com, Domain Name Industry NewsFrom the AuthorExcerpt From the PrefaceDomain Name Arbitration is principally devoted to explaining the process, jurisprudence, and demands of the Uniform Domain Name Dispute Resolution Policy, popularly referred to by its acronym UDRP. The regime was implemented by the Internet Corporation for Assigned Names and Numbers (ICANN) in 1999 following a two-year study by the World Intellectual Property Organization (WIPO). As Neil Brown points out in his Foreword, "the UDRP was an ingenious solution that arose to combat a particular problem connected with the invention of the Internet that promptly became the proceeding of choice for trademark owners alleging abusive registration of domain names and the main instrument for recovering them."From the Inside FlapExcerpt From the Foreword by The Hon Neil A. Brown QCDomain Name Arbitration puts flesh on the bones by illustrating how the jurisprudence crafted by panellists makes the UDRP a living and working dispute resolution regime. It should certainly be on the desk, or on the computer, of every activist in the domain name world, every practitioner and everyone else that works in the field. I already use it in my practice and find it an essential source of knowledge and opinion in this new and exciting field. I highly recommend it. It promises to be the Grey's Anatomy of domain name arbitration.
