It quickly became obvious that this is a great reference book for everyone from insurance sales staff, insurance purchasers on all levels, and researchers. It has some really great charts, but improvements could be made with diagram charts. The book includes math calculations to help determine tax credits and penlites. While each chapter had a review exam questions, in my opinion after reading the entire book, the law is so complex that unless one is working with it on a daily bases, a software program is needed for those of us that may need a quick answer only once every few months. For individuals that are in the tax advising side of this issue, it is obvious to me that reliance upon a good software program to help advise clients would be necessary or to leave the advising to insurance providers. The book failed to provide answers to some of the questions I have heard; If I pay a penalty tax for failure to have insurance, does that give me healthcare insurance?1 of 1 people found the following review helpful.
