Lorna Brazell : Electronic Signatures: Law and Regulation (Special Reports) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Electronic Signatures: Law and Regulation (Special Reports):

0 of 0 people found the following review helpful. Electronic IDs - a taste of things to come! By Phillip Taylor MBE IT lawyers, academics, government officials at all levels and certainly the business community worldwide -- anybody needing to transmit signed documents via the internet -- needs to know about this book. As the title indicates, this is an analysis of the importance of signatures in civil law and common law systems, and how these principles have been applied to electronic signatures. It's a new and emerging area of law, which, as online commerce multiplies worldwide, has become increasingly complex. IT and Patents solicitor, Lorna Brazell points out at the beginning that "few areas of the law can have seen as much legislative activity worldwide in recent years as electronic commerce in general and the status of electronic signatures in particular." To sum it up: the internet is global and so is the book! **PRINCIPAL APPLICATIONS FOR ONLINE TRADING** Covering over 60 jurisdictions worldwide, the book reviews the overlap between electronic identities and signatures (based on the truism that your signature and your identity are tightly intertwined). It examines both thoroughly and extensively, the issues and problems raised by electronic identities in data protection and the privacy of the individual -- a major area of controversial interest being ID cards. In this brand new 2nd edition, the book contains a wealth of current coverage on new regulations, case law and developments and clarifies legal, technical and commercial issues which have emerged within this relatively new area of law. It's also

logically laid out for easy reference. In addition to a useful glossary (defining complicated terms in uncomplicated language), there's an easy to use index and 13 appendices, including two on UNCITRAL Model law on, respectively, electronic contracting and electronic signatures, adopted by the General Assembly of the United Nations. [UNCITRAL: United Nations Commission on International Trade Law] Also check out the useful list of websites across at least 60 nations worldwide which give online sources of texts of electronic signature legislation. Lorna Brazell and her team at Bird Bird have provided in just one volume everything you need to know about electronic signatures in civil law in every relevant jurisdiction worldwide. Graham Smith wrote in the first edition that the law of signatures has always had a whiff of technology about it but the law should be simple. "Regrettably," he says, "the laws are not so simple". But Lorna has done the subject more than justice, and done electronic signatures law proud with the second edition. 0 of 0 people found the following review helpful. Graham Smith wrote in the first edition that the law of signatures has always had a whiff of technology about it but the law should be simple. "Regrettably," he says, "the laws are not so simple". But Lorna has done the subject more than justice, and done electronic signatures law proud with the second edition.

This is the comprehensive guide to explaining the commercial, technical and legal issues involved in the use of electronic signatures. It contains the national legislation of many major jurisdictions, and by putting these into a wider international context clarifies what is one of the fastest moving and highest profile areas of law. These include various implementations of the Electronic Signatures Directive across the existing and future European Union.* A clear guide to an important area of e-commerce* Provides a complete overview of legislative initiatives at the international level following the UNCITRAL Model Laws on Electronic Commerce and Electronic Signatures and the OECD Declaration on Authentication for Electronic Commerce* Explains the impact of the Electronic Signatures Directive* Reviews the work on technical standardisation to ensure interoperability of electronic signature devices* Describes and explains the regulation of certification service providers in all major jurisdictions* A CD-ROM contains all relevant legislation from around the world
