Craig Morris, Arne Jungjohann : Energy Democracy: Germanys Energiewende to Renewables before purchasing it in order to gage whether or not it would be worth my time, and all praised Energy Democracy: Germanys Energiewende to Renewables:

This book outlines how Germans convinced their politicians to pass laws allowing citizens to make their own energy, even when it hurt utility companies to do so. It traces the origins of the Energiewende movement in Germany from the Power Rebels of Schnau to German Chancellor Angela Merkels shutdown of eight nuclear power plants following the 2011 Fukushima nuclear accident. The authors explore how, by taking ownership of energy efficiency at a local level,

community groups are key actors in the bottom-up fight against climate change. Individually, citizens might install solar panels on their roofs, but citizen groups can do much more: community wind farms, local heat supply, walkable cities and more. This book offers evidence that the transition to renewables is a one-time opportunity to strengthen communities and democratize the energy sector in Germany and around the world.

One can make the case that the Energiewende is the most important new public policy initiative anywhere on the planet in the last fifty years - which is why it's so important to have an in-depth, readable, and in many places very moving analysis of the law. Must reading for those interested in community energy - which, on a rapidly heating planet, should be everyone. (Bill McKibben, Author, Educator, Environmentalist and Founder of 350.org) Readers who read English but not German, perhaps misled by the disinformation campaign portraying the Energiewende as a failure, will be astounded to learn what actually happened. (Amory Lovins, Rocky Mountain Institute Founder) Craig Morris and Arne Jungjohann's account of Germany's Energiewende is both sobering and inspiring. It shows that enough committed people -- and a couple of key policies -- can make clean energy a reality. (Elisabeth Kolbert, author of Pulitzer Prize-winning *The Sixth Extinction*) "Energy Democracy" provides an important and inspiring story about how to achieve the post fossil fuel future ... (David Suzuki, author of *Letters to My Grandchildren*) Energy Democracy is the first book on the energy transition that documents who is behind the system change and what motivates them. It is a must read for everyone as it shows why the transition to renewable energy is so important and a power shift in the double sense! (Jakob von Uexkuell, founder of the Right Livelihood Award and the World Future Council) From the Back Cover This book offers an accessible overview of how Germans convinced their politicians to pass laws allowing citizens to make their own energy, even when it hurt utility companies to do so. It traces the origins of the Energiewende movement in Germany from the Power Rebels of Schnau to German Chancellor Angela Merkel's shutdown of eight nuclear power plants following the 2011 Fukushima nuclear accident. The authors explore how, by taking ownership of energy efficiency at a local level, community groups are key actors in the bottom-up fight against climate change. Individually, citizens might install solar panels on their roofs, but citizen groups can do much more: community wind farms, local heat supply, walkable cities and more. This book offers evidence that the transition to renewables is a one-time opportunity to strengthen communities and democratize the energy sector in Germany and around the world. Craig Morris is Contributing Editor of Renewables International and lead author at EnergyTransition.de. He has served as editor of IRENAs REmap report and Greenpeace's Energy (R)evolution in addition to translating several major German books on renewables into English. In 2014, he won the IAEE prize for journalism in energy economics.
