**Lincoln Davies, Alexandra Klass, Hari Osofsky, Joseph Tomain, Elizabeth Wilson : Energy Law and Policy (American Casebook Series)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Energy Law and Policy (American Casebook Series):

It's good in that it provides all the information you need policy-wise, but several times, I felt that the authors were pushing a certain point of view and claiming it was unbiased. That's fine I guess, as long as you're aware, and I think that at law school, you should be on the lookout for that stuff anyway. I didn't particularly enjoy the way the material was presented too much, but it did the job.

The book offers an introduction to energy law and policy both for students who seek to practice in the field and for those interested in better understanding this fascinating, critical area of law. It introduces the key jurisdictional actors that play differing roles in energy controversies and provides students with an understanding of the multi-jurisdictional approach to energy regulation pervasive in the United States. This book breaks away from the traditional approach of looking at energy resources one at a time to provide a more holistic view of the field. It accounts for the complex, interrelated energy systems that buttress society, while addressing the grand energy challenges faced today. The book contains cases, sample statutes and regulations, and pertinent excerpts from energy law and policy experts. These policy-oriented, often empirical materials offer the necessary building blocks for a public law course, particularly one that covers a rapidly transitioning field. The book is organized into three parts that introduce students to the fundamental aspects of the energy sector, energy law, and the most pressing energy topics of the 21st century.
