Environmental Policy and NEPA is a concise study of environmental policy-where we have come from, what we are facing and where we can go in the future. An outgrowth of initiatives taken by the Council of Environmental Quality (CEQ), and edited by the current Associate Director, this publication studies the effectiveness and efficiency of the implementation of the National Environmental Policy Act (NEPA). Divided into three main sections, part one covers the historical background and trends of NEPA. Part two addresses current substantive and conceptual issues associated with the environmental impact assessment (EIA) process. Part three discusses future opportunities including impact on humans, effective public participation in the EIA process and the need for sustainability. This excellent reference brings together 28 contributing authors who combine their expertise to address a multitude of topics. Environmental Policy and NEPA is mandatory reading for the professional, researcher, government policymaker, activist, student or anyone looking for a complete presentation of the EIA process.

this book offers a great deal of information and insight regarding the way the National Environmental Policy Act (NEPA) works, or fails to work, or does not work as well as it should...presents a variety of viewpoints from people who bring different kinds of experience to their analysis, including six academicians and eight federal government agency workers...useful as a text or to supplement upper-division or graduate level courses in environmental policy...Those who teach NEPA or deal with it in their writings should be sure to become familiar with the volume.-
