Robert V. Percival, Christopher H. Schroeder, Alan S. Miller, James P. Leape : Environmental Regulation: Law Science Policy 6e before purchasing it in order to gauge whether or not it would be worth my time, and all praised Environmental Regulation: Law Science Policy 6e:

1 of 1 people found the following review helpful. Percival makes it interesting By water buffalo I am using this in an environmental policy and law course at columbia university. the course is taught in the sustainability management program and i am not a law school student. it is very readable which i find surprising for a case law book. the charts are very good at giving an overview of environmental legislation and jurisdiction of various departments and agencies. 0 of 0 people found the following review helpful. A challenging read By Anon Difficult to read. Cases are

edited down in a manner that makes them difficult to comprehend. The attempt at making a readable product broken up by bits of explanation and analysis, I think, hurt the import of the subject matter. I find this to be my most difficult textbook to read.³ of 5 people found the following review helpful. Required for class

Let's be honest - all law books (and most college level textbooks, for that matter) are overpriced. prices beat college bookstore prices. None of the books are really that interesting, or particularly well written. Law books are generally compilations of court cases that you can obtain for free online, but when a professor assigns reading from particular texts what is one to do? I don't find Environmental Law that interesting, but this book did include a good amount of supplemental material and explanation to go along with the cases that proved to be somewhat useful.

As the Obama administration and the courts change the course of federal environmental law and policy, this best-selling casebook has been updated comprehensively to include the latest legal and policy developments. Each chapter includes new material exploring contemporary developments including the challenges climate change is posing to nearly every aspect of environmental law. The revised Sixth Edition includes:

- Ten New Case Excerpts, including new decisions by the U.S. Supreme Court on CERCLA, the Clean Air Act, NEPA, environmental standing and the Clean Water Act
- Four New Problem Exercises, including exercises on cap-and-trade versus a carbon tax, the application of NEPA to climate change, who should be prosecuted for criminal violations, and negotiation of a post-Kyoto regime to control greenhouse gas (GHG) emissions
- "Midnight Regulations" by the Bush administration and the Obama administration's response
- New emphasis on Environmental Standing, including the Supreme Court's *Massachusetts v. EPA* and *Summers v. Earth Island Institute* decisions
- The new approach to CERCLA "arranger" liability and apportionment embodied in the Supreme Court's *Burlington Northern* decision
- EPA's new definition of "solid waste" and judicial decisions altering the agency's new source review program and programs for controlling interstate air pollution and hazardous air pollutants
- EPA's Clean Air Act "Endangerment" Finding for Emissions of GHGs, reversal of the California waiver denial, and California's controls on GHG emissions from mobile sources
- The relationship between the Clean Water Act's 404 and 402 permit programs, including the Supreme Court's June 22, 2009 *Coeur Alaska* decision
- Climate Change and NEPA, including the 9th Circuit's *Center for Biological Diversity v. NHTSA* decision on the environmental impact of national fuel economy standards
- Remedies for Claims of NEPA Violations, including the Supreme Court's *Winter v. NRDC* decision
- Climate change and the Endangered Species Act, including the impact of the polar bear listing on agency consultation under 7 and 9's prohibition of "takes"
- The latest scientific evidence concerning global warming and climate change, as well as material on the development of carbon trading markets, adaptation strategies, and carbon disclosure
