Gary G. Ford : Ethical Reasoning in the Mental Health Professions before purchasing it in order to gage whether or not it would be worth my time, and all praised Ethical Reasoning in the Mental Health Professions:

The ability to reason ethically is an extraordinarily important aspect of professionalism in any field. Indeed, the greatest challenge in ethical professional practice involves resolving the conflict that arises when the professional is required to choose between two competing ethical principles. *Ethical Reasoning in the Mental Health Professions* explores how to develop the ability to reason ethically in difficult situations. Other books merely present ethical and legal issues one at a time, along with case examples involving "right" and "wrong" answers. In dramatic contrast, *Ethical Reasoning in the Mental Health Professions* provides you with the needed background in methods of ethical reasoning and introduces an innovative nine-step model of ethical decision-making for resolving ethical dilemmas. *Ethical Reasoning in the Mental Health Profession* discusses the ethical codes of both psychology and counseling. This interdisciplinary approach promotes a better understanding of the similarities and differences in the points of emphasis in the two codes, which, in turn, enriches your understanding of the range of ethical considerations relevant to the practice of the mental health professions.

"Ford has produced a stunning volume that should be required reading for applied psychologists and psychology graduate students of every ilk. It is a challenging, engaging and practical book. The field needs this book. Ford deserves accolades and thanks for this superb achievement!" - N. Dickon Reppucci, Professor of Psychology, University of Virginia
