Filing Patents Online is a condensation of many diversified methods, software and applications to write and send applications to patent offices worldwide. Obviously the author had a lot of real-life experience to include the handy tips that can frustrate even experienced users. In addition, the book has a remarkable chapter on how to search for

patentable ideas using Internet; the resources recommended are very useful. The brief survey of the US Patent laws is also helpful for both patent attorneys as well as inventors. I would highly recommend this book to patent attorneys who may be shy to indulge in Internet-based filing of patents and most strongly to inventors who may want to cut the entire cost of an attorney (though there are some risks involved) and file patents on their own. 6 of 6 people found the following review helpful. This book is now out of date. By David Gange. When published in 2003 this was a useful and necessary guide to electronic patent filing. However it is now four years later and the filing systems described, especially the US patent office electronic filing system, have changed completely. You can now send in your patent application in PDF form. A simple explanation of how to use the system is available at the US patent office web site.

The average cost of an uncomplicated patent application filing is about \$10,000. This high cost can leave thousands of inventors out in the cold. *Filing Patents Online: A Professional Guide* is a complete manual that walks inventors through each step of filing and prosecuting the patent online at a fraction of the cost. The online filing system recommended in the book allows continuous monitoring of the review status and for a much faster approval than the traditional route. Drawing from the many years of the author's experience as both an inventor and a patent agent, this guide teaches the methods of research, planning, and the art of writing winning claims that will result in commercially valuable patents.
