From Routledge : Frontiers in Resource and Rural Economics: Human-Nature, Rural-Urban Interdependencies (Rff Press) before purchasing it in order to gage whether or not it would be worth my time, and all praised *Frontiers in Resource and Rural Economics: Human-Nature, Rural-Urban Interdependencies* (Rff Press):

Most land in the United States is in rural areas, as are the sources of most of its fresh water and almost all its other natural resources. One of the first books to approach resource economics and rural studies as fundamentally interconnected areas of study, *Frontiers in Resource and Rural Economics* integrates the work of 18 leading scholars in resource economics, rural economics, rural sociology and political science in order to focus on two complex interdependencies—one pertaining to natural resources and human welfare, the other to urban and rural communities and their economies. The book reviews the past 50 years of scholarship in both natural resource and rural economics. It contrasts their different intellectual and practical approaches and considers how they might be refocused in light of pressing demands on human and natural systems. It then proposes a 'new rural economics' that acknowledges the full range of human-ecosystem and urban-rural interdependencies. It explores the relationship between natural resources and economic growth, and considers the prospects for amenity-driven growth that would benefit both new and traditional inhabitants of rural areas. Later chapters explore the politics of place, spatial economics, strategies for reducing rural poverty, and prospects for linking rural and environmental governance. Throughout, the book emphasizes innovative research methods that integrate natural resource, environmental, and rural economics.

'Many key issues of the 21st Century revolve around rural-urban interdependencies, including alternative energy, protecting our natural environment, and maintaining the vitality of Americans rural communities. They require innovative applications of rural development and natural resource policy. *Frontiers in Resource and Rural Economics* will be valuable to those interested in regional planning, rural community development, urban sprawl and exurban change, and natural resources.'
